IRADAS: STAINLESS STEEL QUALITIES IN PVD COLORS

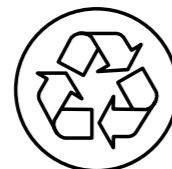

ANTIBACTERIAL

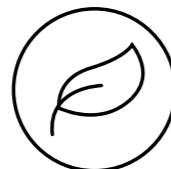

SCRATCH
RESISTANT

CORROSION
RESISTANT

RECYCLABLE

NON-TOXIC

The new Iradas collection finishes are realized with **PVD** technology "**Physical Vapor Deposition**". This innovative technology originates in the aerospace field and consists of thin metallic films on steel surfaces. The process takes place in vacuum rooms, where metals like chrome, zirconium and titanium are vaporized. As a result of an electric field, the metallic vapours settle and condense on the outer layers, producing the requested finish. It is a physical process that gives to **superior component qualities compared to common finishing and coating processes** like chemical or elettro-chemical galvanic treatments. Moreover, PVD is a **low environmental impact technology** and **it enables us to obtain non-toxic and non-allergenic surfaces**, suitable for sanitary and food applications.

STAINLESS STEEL
MEETS COLOUR:
GOLD, BLACK,
COPPER AND BRONZE.
FIVE DIFFERENT
COLOURS TO CHOOSE,
AVAILABLE IN THE
ELEGANT POLISHED
OR REFINED BRUSHED
FINISHES.
